Knoxville, Tennessee

RESEARCH

Precision Health Modeling With Wearable Devices

Dec 2024 - Mar 2025

The research looks at how wearable devices collect health data like heart rate, activity, and sleep. That data is then analyzed to predict future health outcomes or risks. The goal is to move from reacting to illness toward preventing it with early detection and personalized care.

UTK Applied Systems Laboratory

Digital Twin Technology in the Intensive Care Unit

Mar 2025 - Oct 2025

This research explores Digital Twin Technology in the ICU to build real-time virtual models of patients. I explained how ICU rooms generate data from vitals, imaging, and labs, then showed how to extract and translate that information into a language model to simulate conditions, predict complications, and guide personalized care.

UTK Applied Systems Laboratory

Evaluating the Impact of ABSITE Performance

Aug 2025 - Present

This research examines whether ABSITE scores are affected by the number of hours residents work in different rotations. It analyzes if higher- or lower-hour rotations have a significant impact on exam performance, helping to understand how workload influences knowledge and preparedness.
